

Assignment -02

Python Programming

Assignment Date	25 September 2022
Student Name	Ragulraj G
Student Register Number	422719106016
Maximum Marks	2 Marks

Question :

Build a python code, Assume you get temperature and humidity values (Generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature .

Solution :

```
import time
```

```
i=0
```

```
While (i<=1440):
```

```
    i=i+1
```

```
    time.sleep(10)
```

```
    import random
```

```
    temp=random.randint(0,30)
```

```
    humid=random.randint(1,1000)
```

```
    if temp<=15:
```

```
        print (temp,"degree the temperature is low")
```

```
    elif temp<=25:
```

```
        print (temp,"degree the temperature is normal")
```

```
    else:
```

```
        print (temp,"degree the temperature is high")
```

```
    if humid<=50:
```

```
        print (humid,"the humidity is low")
```

```
    elif humid<=80:
```

```
        print (humid,"the humidity is normal")
```

```
    else:
```

```
        print (humid,"the humidity is high")
```

```
import time
i=0
while (i<=1440):
    i=i+1
    time.sleep(10)

    import random
    temp=random.randint(0,30)
    humid=random.randint(1,100)
    if temp<=15:
        print (temp, "degree the temperature is low")
    elif temp<=25:
        print (temp, "degree the temperature is normal")
    else:
        print (temp, "degree the temperature is high")
    if humid<=50:
        print (humid, "the humidity is low")
    elif humid<=80:
        print (humid, "the humidity is normal")
    else:
        print (humid, "the humidity is high")
```
